

1. Answer this question using UF_QuickFind

a) Show the contents of id[] after connecting the following pairs (0, 1), (0,2) (0,3) (0,4), assume S = {0, 1, 2, 3, 4}.

b) What is the total running time for connecting N-1 pairs like these: (0,1), (0, 2), ... (0, N-1)?

Answer: a)

| | 0 | 1 | 2 | 3 | 4 |
|--------------|---|---|---|---|---|
| Initial | 0 | 1 | 2 | 3 | 4 |
| union (0,1) | 1 | 1 | 2 | 3 | 4 |
| union (0, 2) | 2 | 2 | 2 | 3 | 4 |
| union (0, 3) | 3 | 3 | 3 | 3 | 4 |
| union (0, 4) | 4 | 4 | 4 | 4 | 4 |

b) Each argument to the union like those comes from different component, thus union has $O(n)$ running time. So $(n-1)$ these kind of unions have $(n-1)*O(n)=O(n^2)$ running time.

2. Answer this question using UF_QuickUnion

a) Show the contents of id[] after connecting the following pairs (0, 1), (0,2) (0,3) (0,4), assume S = {0, 1, 2, 3, 4}.

b) What is the total running time for connecting N-1 pairs like these: (0,1), (0, 2), ... (0, N-1)?

Answer: a)

b) For each union (p, q) like those, the total number of comparisons for $\text{find}(p)$ is $1+2+\dots+(n-2)=O(n^2)$, the total number for $\text{find}(q)$ is $n=O(n)$, thus the total running time for $(n-1)$ unions is $O(n^2)$.

3. Answer this question using UF_WeightedQuickUnion

a) Show the contents of `id[]` after connecting the following pairs (0, 1), (0,2) (0,3) (0,4), assume $S = \{0, 1, 2, 3, 4\}$.

b) What is the total running time for connecting $N-1$ pairs like these: (0,1), (0, 2), ... (0, $N-1$)?

Answer: a)

b) For each union (p, q) like those, `find(p)` and `find(q)` takes constant time. Thus $(n-1)$ unions like those has $O(n)$ total running time.

4. Draw the tree corresponding to the following `id[]` array. Can this be the result of running weighted quick-union? Explain why this is impossible or give a sequence of operations that result in this array.

| | | | | | | | | | | |
|-------|---|---|---|---|---|---|---|---|---|---|
| i | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| id[i] | 1 | 1 | 3 | 1 | 5 | 6 | 1 | 3 | 4 | 5 |

Answer:

The tree is shown below. It cannot be the result of running weighted quick-union because that algorithm guarantees the height of any tree built by it will be at most $\lg N$. Here we have $\text{height}=4$, $N=10$, and $\text{height} > \lg N$.

Note that graph in the following exercises refer to undirected graph.

5. Draw the adjacency matrix built by constructing the graph from input file depicted at Figure 1.

Answer: The following is the adjacency matrix representation. Note it cannot represent parallel edges between 3 and 10.

| | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
|----|---|---|---|---|---|---|---|---|---|---|----|----|
| 0 | | | | T | | | | T | | | | |
| 1 | | | | | T | | | | T | | | T |
| 2 | T | | | T | | T | T | | | | | |
| 3 | | | T | | | | T | | | | T | |
| 4 | | T | | | | | | | T | | | |
| 5 | | | T | | | | | | | | T | |
| 6 | T | | T | T | | | | | | | | |
| 7 | | | | | | | | | T | | | T |
| 8 | | T | | | T | | | T | | | | T |
| 9 | | | | | | | | | | | | |
| 10 | | | | T | | T | | | | | | |
| 11 | | T | | | | | | T | T | | | |

tinyGex2.txt

```

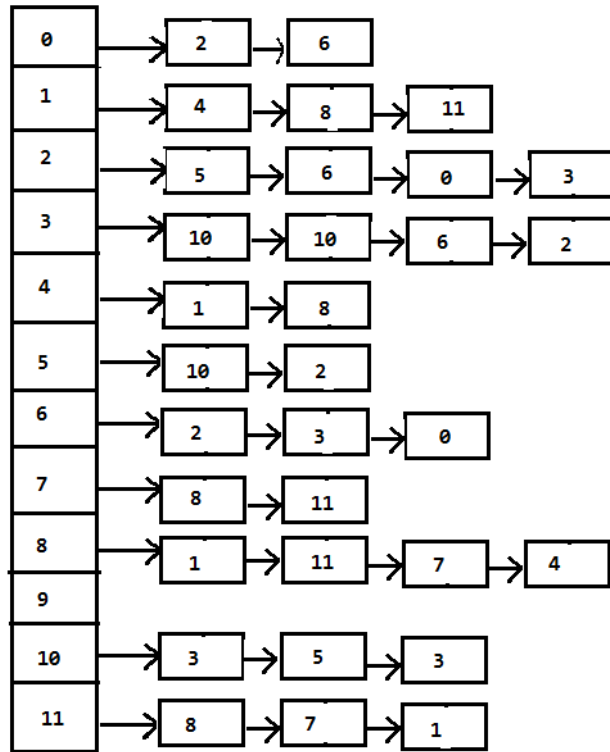

V → 12
16 ← E
8 4
2 3
1 11
0 6
3 6
10 3
7 11
7 8
11 8
2 0
6 2
5 2
5 10
3 10
8 1
4 1

```

Figure 1 Graph Input File

6. Draw the adjacency lists built by constructing the graph from input file depicted at Figure 1.

Answer: The following is the adjacency lists representation. Note it can represent parallel edges between 3 and 10.

7. What is the maximum number of edges in a graph with V vertices and no parallel or self-loop edges?

Answer: $V*(V-1)/2$

8. What is the minimum number of edges in a graph with V vertices, none of which are isolated?

Answer: $V-1$
